SAFETY INSTRUCTIONS

Warning: Failure to heed all safety and operating instructions and warnings regarding use of this product can result in serious bodily injury.

READ PROPERLY COMPLETE ASSEMBLY INSTRUCTIONS BEFORE STARTING OF ASSEMBLY

Install all parts indicated in assembly instructions. Failure to fully assemble product before use could result in personal injury.

Assembly of product requires use of hand or power tools. If you are not experienced in using these types of tools, have product dealer do the install for you.

Some parts contain sharp edges, wear protective gloves if necessary.

Always keep your assembly area clean, uncluttered and well lit.

Keep visitors and children a safe distance away from the assembly area. Visitors should wear the same safety equipment described under.

Never operate your UTV with the cab doors open. Failure to properly latch the doors before moving the vehicle could result in serious injury.

Dress for safety. DO NOT wear loose clothing, gloves, neckties or jewelry if using power tools to assemble this product.

IMPORTANT: Carefully tighten the front glass holder screws. Overtightening these screws may cause glass to crack.

Never drive your UTV with the cab front window in open position. Failure to properly latch/lock the front window before driving the vehicle could result in serious injury.

Hard Cabs.

MAINTENANCE AND CLEANING

To clean polycarbonate surface use soapy water solution or other subtle means.

Dirt and dust wash by gently water stream and swipe only with wet or damp means in the direction from top to bottom.

The recommended frequency of cleaning of polycarbonate part is about 1 time per month or according to the actual degree of pollution.

Do not use detergents that could scratch the surface plates. (abrasives, harsh fabrics, etc.)

Do not use solvents or alkaline detergents or cleaners with ammonia (ammonium hydroxide).

Do not remove the impurities from the surface of the razor blades or other sharp items.

Do not clean cabin when the polycarbonate plates are heated by the sun.

Do not use the squeegee, it could be scratched surface plates.

Do not clean the water current strength greater than 50 bar (WAP)

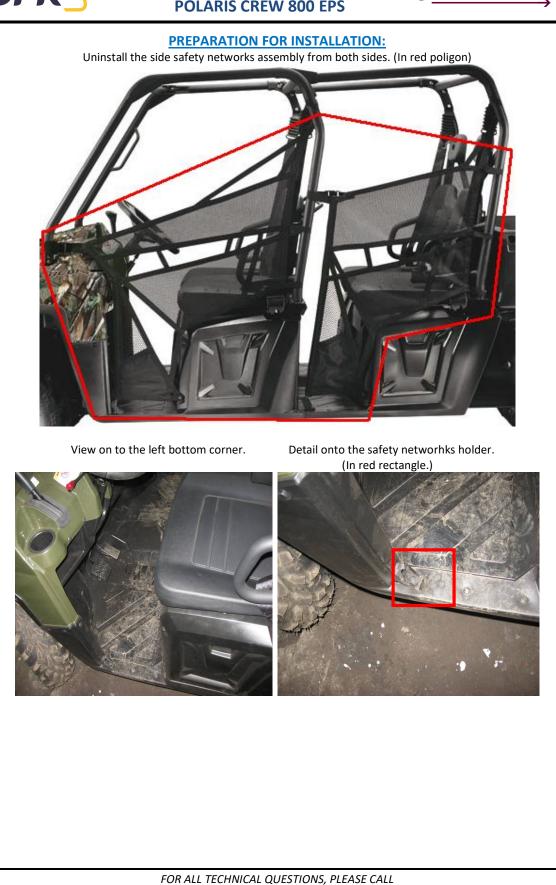

The manufacturer is not responsible for scratching the surface in case of failure to comply with the above instructions.

All bolted connections of cab must be by user at regular intervals checked and tightened.

Hard Cabs

Cut the hose without the electromagnetic vent and insert tightening straps onto the hose. Insert the air vent valve into the both end of the hose and tight the straps hard. Detail view.

Hot water heating system connected to the primary (short) circuit of the engine cooling. NEXT FEW STEPS ARE FOR INSTALLATION ON PETROL ENGINE

Lead the water hoses from the heater to the UTV's engine.

Uninstall the thermostat flange from the engine and connect that with flange (included with cabin). You may be have to disconnect the original water hose from the thermostat flange before uninstallation.

FOR ALL TECHNICAL QUESTIONS, PLEASE CALL DFK AMERICA INC. (630) 324-8585

You have to place the included flange rubber side (red line) on engine. (For detail of flange see page No.:69) Place the original flange with included flange back to position on engine and fix these by 2 screws M6x50 and washers. Insert tightening strap on the water hose with electric vent and connect the hose with tube on the flange and tighten the strap very hard. You can install back the original hose to the original flange.

NEXT FEW STEPS ARE FOR INSTALLATION ON DIESEL ENGINE

Take out the seat from the UTV and uninstall the original screw (in red circle) from the UTV's engine.

Hard Cabs.

Hard Cabs,

(Detail view on next page)

Detail view

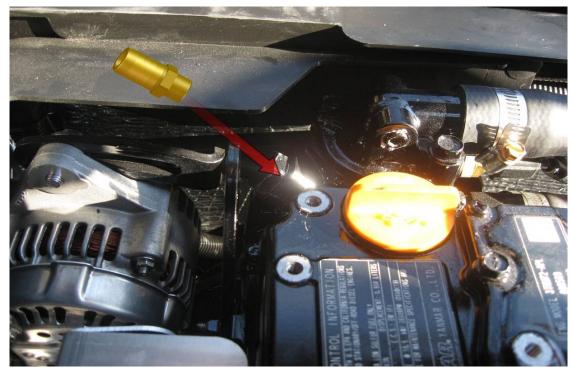

Drop the screw glue on heater tube and insert the heater tube instead of the original screw and tighten very hard. Insert the tightening strap on the heater hose and insert hose on the heater tube. Tighten the strap very hard.

FOR ALL TECHNICAL QUESTIONS, PLEASE CALL DFK AMERICA INC. (630) 324-8585

Hard Cabs.

You have to be careful to cut correct hose in next step.

Cut the cooling system hose (run the cooling liquid back to engine) and attach the "Y" coupling to connect the heater hose. The hose containing the air vent valve has to bring water from the heater.

Principle an electric connection to the network of UTV's body:

- Heating is connected through a fuse box and then through the ignition box of the truck.

Detail of connection.

HardCabs,

SEE NEXT PAGE

1. Before the first turning on the hot water heater it is necessary to check the tightness of the cooling circuit of the hot water heater.

2. If necessary add more cooling liquid to the cooling circuit.

3. Turn UTV's engine on and open the air vent valve.

<u>4. Turn heater on and wait for the maximum temperature. When the cooling</u> liquid starts to leak from the air vent valve close the valve.

Turn off heater and add more cooling liquid to the cooling circuit if need it.

In cab units where you are installing the glove compartment heater provided in the standard DFK Cab Kit, it is important to check the coolant level regularly at least 4-5 times during the first several days of operation and fill as necessary until the coolant level has stabilized.

The heater will draw and retain coolant, sometimes at the expense of coolant to the engine.

This can cause engine overheating if not managed properly.

FOR ALL TECHNICAL QUESTIONS, PLEASE CALL DFK AMERICA INC. (630) 324-8585
