

INSTALLATION INSTRUCTIONS

YAMAHA VIKING YXM 700

SAFETY INSTRUCTIONS

Warning: Failure to heed all safety and operating instructions and warnings regarding use of this product can result in serious bodily injury.

READ PROPERLY COMPLETE ASSEMBLY INSTRUCTIONS BEFORE STARTING OF ASSEMBLY

Install all parts indicated in assembly instructions. Failure to fully assemble product before use could result in personal injury.

Assembly of product requires use of hand or power tools.

If you are not experienced in using these types of tools,
have product dealer do the install for you.

Some parts contain sharp edges, wear protective gloves if necessary.

Always keep your assembly area clean, uncluttered and well lit.

Keep visitors and children a safe distance away from the assembly area. Visitors should wear the same safety equipment described under.

Never operate your UTV with the cab doors open. Failure to properly latch the doors before moving the vehicle could result in serious injury.

Dress for safety. DO NOT wear loose clothing, gloves, neckties or jewelry if using power tools to assemble this product.

Insert all nut covers after you finish installation.

Never drive your UTV with the cab front window in open position.

Failure to properly latch/lock front window before driving the vehicle could result in serious injury.

Please be careful not to break the plastic washers. When tightening screws with plastic washers use maximal power 3,7 foot-pound force (5 Nm)!!!

www.hardcabs.com

3

WARNING: For safety purposes, if the DFK Cab doors are removed, it is mandatory that the OEM manufactured Half Doors or Nets are REINSTALLED before operating the vehicle.

MAINTENANCE AND CLEANING

To clean polycarbonate surface use soapy water solution or other subtle means.

Dirt and dust wash by gently water stream and swipe only with wet or damp means in the direction from top to bottom.

The recommended frequency of cleaning of polycarbonate part is about 1 time per month or according to the actual degree of pollution.

Do not use detergents that could scratch the surface plates. (abrasives, harsh fabrics, etc.)

Do not use solvents or alkaline detergents or cleaners with ammonia (ammonium hydroxide).

Do not remove the impurities from the surface of the razor blades or other sharp items.

Do not clean cab when the polycarbonate plates are heated by the sun.

Do not use a squeegee, it could scratch surface plates.

Do not clean the water pressure greater than 50 bar (WAP)

The manufacturer is not responsible for scratches on polycarbonate in cases of failure to comply with the above instructions.

All bolted connections of cab must be checked and tightened by user at regular intervals.

Please be careful not to break the plastic washers. When tightening screws with plastic washers use maximal power 3,7 foot-pound force (5 Nm)!!!

Pull the heater from glove box and rotate (bend) down. It is necessary to air vent have higher position than heater.

SEE NEXT PAGE!

DFK HardCabs 2464 Wisconsin Avenue Downers Grove, IL 60515 www.hardcabs.com

info@hardcabs.com

It is absolutely necessary to bleed the air out of the UTV's engine cooling system. Incomplete bleeding of cooling system can result in engine damage. If you don't have sufficient experience with this process, we strongly recommend professional service technician assistance. We are not responsible for damages when cooling system is not bleeded out completely. Please note that addition of heater system will require more than 2 liters of coolant fluid.

- 1. Important: After the heater system is installed, check the system for leaks.

 Turn on the electric vent switch and confirm that the engine is cold.

 Start the engine, open bleeding valve and wait until engine warms up.

 Important: Allways check engine temperature if it overheats turn off engine.
- 2. To achieve engine operating temperature depress the accelerator to increase the engine RPM. This will increase the pressure and flow of the water pump forcing more coolant through the heater. After checking the operating temperature, turn off engine and open it. Trapped air should come out from heater system throughout bleeder valve. Repeat this procedure until heater/cooling system is completely bleeded out.

The DFK Cab heater, like the heater in a car, generates heat from the vehicle's engine.

In nearly all cases, the heater should generate enough heat from your UTV, side by side, or tractor engine that you may need to turn the heater off periodically otherwise the air in the cabin may be too hot.

It is important to check the coolant level regularly at least 4-5 times during the first several days of operation and fill as necessary until the coolant level has stabilized. The heater will draw and retain coolant, sometimes at the expense of coolant to the engine. This can cause engine overheating if not managed properly.
